

KHUSHI DHANKHAR

Software Developer — Python, Backend & Web Technologies

+91 81683 49350  [dhankharkhushi04](#)  [khushi-dhankhar](#)  [KhushiDhankhar](#)  [khushi_915](#)  [Portfolio](#)

PROFESSIONAL SUMMARY

B.Tech graduate in Computer Science (AI & ML), CGPA 8.5/10, with a strong foundation in Object-Oriented Programming, Data Structures & Algorithms, SQL/database design, and web fundamentals (HTML, CSS, JavaScript). Proficient in Python and C++, with hands-on backend engineering experience building scalable, multithreaded applications and production-grade tools during two internships at Maruti Suzuki, both graded Excellent. 800+ problems solved on LeetCode reflect sharp problem-solving and logical ability. Shipped and deployed independent projects end-to-end, from architecture to live production. Seeking a Software Developer Trainee role to bring clean, well-tested code and strong fundamentals to a real-world engineering team.

PROFESSIONAL EXPERIENCE

Maruti Suzuki — Project Trainee, ICSMSAM (Cybersecurity)

Jul 2025 – Aug 2025

Gurgaon | Grade: Excellent

- Engineered a 4-stage subdomain enumeration pipeline combining multithreaded DNS brute-forcing, passive OSINT via Bing scraping (BeautifulSoup + regex), and crt.sh certificate transparency queries, with concurrent HTTPS live-host verification.
- Architected a configurable thread-pool concurrency model (ThreadPoolExecutor, default 20 threads) with an argparse-driven CLI, cutting scan time on large wordlists while keeping the codebase modular and scalable.
- Built and shipped a CLI hashing utility (MD5, SHA-256) with persistent hash-to-plaintext lookup storage, applying clean code principles and systematic debugging.

Maruti Suzuki — Project Trainee, ITSEC (IT Security)

Jun 2024 – Jul 2024

Gurgaon | Grade: Excellent

- Developed a multithreaded network port scanner in Python using socket APIs, concurrently scanning custom port ranges with service identification via port-to-service resolution.
- Implemented structured audit logging (rotating file handlers, UUID session tracking) and optimized scan performance through concurrent TCP handling versus sequential execution.
- Partnered with a cross-functional team to gather requirements and contribute to solution design, translating specifications into working software.

PROJECTS

CipherVault — Password-Based Privacy Tool (Python, Flask, AES, PBKDF2, HTML/CSS/JS) — [Live App](#)

- Designed and deployed a full-stack privacy tool letting anyone lock messages and files behind a password with zero accounts, zero data upload, and zero password recovery — closing the trust gap left by closed-source encryption apps.
- Built the Flask backend and browser-based encryption engine end-to-end and shipped it to a live production URL, giving users a verifiable, self-hosted alternative to black-box privacy tools.

Domain Enumerator — Attack Surface Mapping Tool (Python, DNS, Multithreading, BeautifulSoup, crt.sh) — [GitHub](#)

- Eliminated the blind spots of manual subdomain discovery by building a 4-stage recon pipeline for security and pentest teams mapping attack surfaces.
- Fused active DNS brute-forcing with passive OSINT (Bing, crt.sh) and concurrent HTTPS validation into one tool, cutting recon time and surfacing subdomains manual methods missed.

Network Utilities Suite — Security Toolkit (Python, Sockets, TCP/IP, Tkinter) — [GitHub](#)

- Consolidated three disconnected security tools into one suite, cutting tool-switching for engineers running day-to-day port scans, hash lookups, and file signature checks.
- Delivered a concurrent port scanner with audit logging, a CLI MD5/SHA-256 hashing tool with persistent lookup storage, and a Tkinter signature-detection file scanner, each with a traceable audit trail.

EDUCATION

B.Tech, Computer Science Engineering (AI & ML) — UIET, Maharshi Dayanand University (MDU), Rohtak

2022 – 2026

CGPA: 8.5 / 10

KEY SKILLS

- Programming Languages:** Python (OOP, Multithreading, Modular Design), C++
- CS Fundamentals:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOPS), Operating Systems, Computer Networks (TCP/IP, DNS, HTTP, TLS/SSL)
- Web Technologies:** HTML, CSS, JavaScript, Flask, REST APIs
- Databases:** SQL, MySQL, Database Design & Query Optimization
- Software Development:** SDLC, Agile Methodologies, Unit Testing & Debugging, Clean Code Practices, Modular & Scalable System Design
- Tools & Platforms:** Git, GitHub, Linux CLI, Google Cloud Platform (GCP), Postman
- Deployment Tools:** Netlify, Render
- Other:** Generative AI / LLMs, Prompt Engineering, Cryptography & Hashing (MD5/SHA-256), OSINT Techniques

CERTIFICATIONS & ACHIEVEMENTS

- Google Cloud Generative AI Virtual Internship — SmartBridge & SmartInternz × Google Cloud (Nov 2025 – Jan 2026); Google Skill Badge in Generative AI on GCP; Certificate ID: VIP-AI-2026-30744.
- LeetCode: [800+ problems solved](#) — strong algorithmic reasoning and problem-solving ability.
- MySQL Mentor, Byte Squad: Guided peers on database concepts and query optimization.
- Smart India Hackathon (SIH) Participant: Collaborative problem-solving under competitive, time-bound conditions.
