

KHUSHI

Software Engineer — Python, Backend & Security Development

+91 81683 49350 | dhankharkhushi04@gmail.com | linkedin.com/in/khushi-dhankhar-20130525a | github.com/KhushiDhankhar | Rohtak, Haryana

PROFESSIONAL SUMMARY

Final-year B.Tech CSE (AI & ML) student with a strong foundation in software development, data structures & algorithms, and backend engineering. Proficient in Python and C++, with hands-on experience building scalable, multithreaded applications and security tools during two internships at Maruti Suzuki, both graded Excellent. Solid grasp of SDLC, Agile practices, Git-based version control, and core computer science fundamentals (OOP, networking, databases). 800+ problems solved on LeetCode with strong analytical and debugging skills. Seeking a Software Engineer role to contribute clean, efficient, and well-tested code to real-world, high-scale production systems.

PROFESSIONAL EXPERIENCE

Maruti Suzuki — Project Trainee, ICSMSAM (Cybersecurity)

Jul 2025 – Aug 2025

Gurgaon | Grade: Excellent

- Engineered a 4-stage subdomain enumeration pipeline combining multithreaded DNS brute-forcing, passive OSINT via Bing scraping (BeautifulSoup + regex), and crt.sh certificate transparency queries, with concurrent HTTPS live-host verification.
- Architected a configurable thread-pool concurrency model (ThreadPoolExecutor, default 20 threads) with an argparse-driven CLI, cutting scan time on large wordlists while keeping the codebase modular and scalable.
- Built and shipped a CLI hashing utility (MD5, SHA-256) with persistent hash-to-plaintext lookup storage, applying clean code principles and systematic debugging.

Maruti Suzuki — Project Trainee, ITSEC (IT Security)

Jun 2024 – Jul 2024

Gurgaon | Grade: Excellent

- Developed a multithreaded network port scanner in Python using socket APIs, concurrently scanning custom port ranges with service identification via port-to-service resolution.
- Implemented structured audit logging (rotating file handlers, UUID session tracking) and optimized scan performance through concurrent TCP handling versus sequential execution.
- Partnered with a cross-functional team to gather requirements and contribute to solution design, translating specifications into working software.

PROJECTS

Domain Enumerator — Attack Surface Mapping Tool (Python, DNS, Multithreading, BeautifulSoup, crt.sh) — [GitHub](#)

- Built for security/pentest teams whose manual subdomain discovery during recon was slow and missed assets, leaving blind spots in attack surface coverage.
- Combined active DNS brute-forcing with passive OSINT (Bing, crt.sh) and concurrent HTTPS validation into a single 4-stage pipeline, cutting recon time and surfacing subdomains manual methods missed.

Network Utilities Suite — Security Toolkit (Python, Sockets, TCP/IP, Tkinter) — [GitHub](#)

- Built for security engineers/analysts who relied on multiple disconnected tools for day-to-day port scanning, hash lookups, and file signature checks.
- Replaced three separate tools with one suite — concurrent port scanner with audit logging, CLI MD5/SHA-256 hashing tool with persistent lookup storage, and a Tkinter signature-detection file scanner — cutting tool-switching and adding a traceable audit trail.

AES File & Message Encryption Tool (Python, Cryptography, AES-CBC, PBKDF2) — [GitHub](#)

- Built for anyone needing local, password-based file/message encryption without managing separate key files or trusting closed-source software.
- Delivered a self-contained AES-CBC tool with PBKDF2HMAC key derivation, salting, PKCS7 padding, and Base64-encoded ciphertext — verifiable, open-source encryption instead of a black-box tool.

EDUCATION

B.Tech, Computer Science Engineering (AI & ML) — UIET, Maharshi Dayanand University (MDU), Rohtak

2022 – 2026

CGPA: 8.46 / 10 (through 7th Semester)

KEY SKILLS

- Programming Languages:** Python (OOP, Multithreading, Modular Design), C++, SQL
- CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks (TCP/IP, DNS, HTTP, TLS/SSL)
- Software Development:** SDLC, Agile Methodologies, Unit Testing & Debugging, Clean Code Practices, Modular & Scalable System Design
- Tools & Platforms:** Git, GitHub, Linux CLI (basic commands), MySQL
- Other:** Generative AI / LLMs, Prompt Engineering, Cryptography & Hashing (MD5/SHA-256), OSINT Techniques

CERTIFICATIONS & ACHIEVEMENTS

- Google Cloud Generative AI Virtual Internship — SmartBridge & SmartInternz × Google Skill Boost (Nov 2025 – Jan 2026); Google Skill Badge in Generative AI on GCP; Certificate ID: VIP-AI-2026-30744.
- LeetCode: 530+ problems solved — strong algorithmic reasoning and problem-solving ability.
- MySQL Mentor, Byte Squad: Guided peers on database concepts and query optimization.
- Smart India Hackathon (SIH) Participant: Collaborative problem-solving under competitive, time-bound conditions.
